

CLAIMS

1. A communication terminal having a communication function  
and installing a common function to a function that an  
5 associated communication terminal installs, the communication  
terminal comprising:

data generation means for generating data to execute the  
function that the home terminal installs and data to execute  
the function that the associated communication terminal  
10 installs; and

transmission means for transmitting the data to execute  
the function that the associated communication terminal  
installs.

15 2. The communication terminal according to claim 1, which  
has a video telephone function, the communication terminal  
further comprising;

input data analysis means for analyzing input data; and  
data matching means for outputting data provided by  
20 matching the data of the home terminal and the data of the  
associated communication terminal based on the analysis result  
to the input data analysis means.

25 3. The communication terminal according to claim 2, further  
comprising:

input means for inputting at least one data selected from among image data, voice data, and key input data to the input data analysis means as the input data.

5 4. A communication method of a communication terminal installing a common function to a function that an associated communication terminal installs, the communication method comprising the steps of:

10 generating data to execute the function that the home terminal installs and data to execute the function that the associated communication terminal installs; and

transmitting the data to execute the function that the associated communication terminal installs.
